

# Natural disaster assessment using AI

Jakub Sobolewski, Mateusz Borowski, Mikołaj Piórczyński, Karol Rogoziński,  
Aleksandra Jamróz, Bartosz Cywiński

## Main motivation

We are a group of friends passionate about Machine Learning and how it can transform the world we live in. Leveraging ML in space applications makes us excited in particular, especially when it can provide safety for all of us on the ground in the hour of need,

## Inspiration

We were excited to meet experts in the field. We managed to have a lengthy chat with mr. John F. Hall (ex NASA). We had a great chat about challenges that NASA faces and about his experience as a firefighter that confirmed our

thesis and that we were on the right track. We also talked about how AI can transform our lives in the future and if there is life outside of earth. Truly inspirational!
